## 1 PROBLEM

Let  $\mathbb{C}$  be the complex vector space of  $2 \times 2$  matrices with complex entries. Let

$$\mathbf{B} = \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \quad (1.0.1)$$

and let  $\mathbf{T}$  be the linear operator on  $\mathbb{C}^{2 \times 2}$  defined by  $\mathbf{T}(\mathbf{A}) = \mathbf{BA}$ . What is the rank of  $\mathbf{T}$ ? Can you describe  $\mathbf{T}^2$ ?

## 2 SOLUTION

An ordered basis for  $\mathbb{C}^{2 \times 2}$  is given by

$$\mathbf{A}_{11} = \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix} \quad \mathbf{A}_{12} = \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} \quad (2.0.1)$$

$$\mathbf{A}_{21} = \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix} \quad \mathbf{A}_{22} = \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix} \quad (2.0.2)$$

Now, we compute

$$\mathbf{T}(\mathbf{A}_{11}) = \mathbf{BA}_{11} \quad (2.0.3)$$

$$= \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \begin{pmatrix} 1 & 0 \\ 0 & 0 \end{pmatrix} \quad (2.0.4)$$

$$= \begin{pmatrix} 1 & 0 \\ -4 & 0 \end{pmatrix} \quad (2.0.5)$$

from (2.0.5) we have

$$\mathbf{T}(\mathbf{A}_{11}) = \mathbf{A}_{11} - 4\mathbf{A}_{21} \quad (2.0.6)$$

$$\mathbf{T}(\mathbf{A}_{12}) = \mathbf{BA}_{12} \quad (2.0.7)$$

$$= \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \begin{pmatrix} 0 & 1 \\ 0 & 0 \end{pmatrix} \quad (2.0.8)$$

$$= \begin{pmatrix} 0 & 1 \\ 0 & -4 \end{pmatrix} \quad (2.0.9)$$

from (2.0.9), we have

$$\mathbf{T}(\mathbf{A}_{12}) = \mathbf{A}_{12} - 4\mathbf{A}_{22} \quad (2.0.10)$$

$$\mathbf{T}(\mathbf{A}_{21}) = \mathbf{BA}_{21} \quad (2.0.11)$$

$$= \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \begin{pmatrix} 0 & 0 \\ 1 & 0 \end{pmatrix} \quad (2.0.12)$$

$$= \begin{pmatrix} -1 & 0 \\ 4 & 0 \end{pmatrix} \quad (2.0.13)$$

from (2.0.13), we have

$$\mathbf{T}(\mathbf{A}_{21}) = -\mathbf{A}_{11} + 4\mathbf{A}_{21} \quad (2.0.14)$$

$$\mathbf{T}(\mathbf{A}_{22}) = \mathbf{BA}_{22} \quad (2.0.15)$$

$$= \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \begin{pmatrix} 0 & 0 \\ 0 & 1 \end{pmatrix} \quad (2.0.16)$$

$$= \begin{pmatrix} 0 & -1 \\ 0 & 4 \end{pmatrix} \quad (2.0.17)$$

from (2.0.17), we have

$$\mathbf{T}(\mathbf{A}_{22}) = -\mathbf{A}_{12} + 4\mathbf{A}_{22} \quad (2.0.18)$$

Now, by (2.0.6), (2.0.10), (2.0.14) and (2.0.18) we write matrix of the linear transformation as follows

$$\mathbf{P} = \begin{pmatrix} 1 & 0 & -1 & 0 \\ 0 & 1 & 0 & -1 \\ -4 & 0 & 4 & 0 \\ 0 & -4 & 0 & 4 \end{pmatrix} \quad (2.0.19)$$

Also, we know that the rank of a linear transformation is same as the rank of the matrix of the linear

transformation. Thus, we find the rank of matrix **P**.

$$\begin{pmatrix} 1 & 0 & -1 & 0 \\ 0 & 1 & 0 & -1 \\ -4 & 0 & 4 & 0 \\ 0 & -4 & 0 & 4 \end{pmatrix} \xleftrightarrow{r_3=r_3+4r_1} \begin{pmatrix} 1 & 0 & -1 & 0 \\ 0 & 1 & 0 & -1 \\ 0 & 0 & 0 & 0 \\ 0 & -4 & 0 & 4 \end{pmatrix} \quad (2.0.20)$$

$$\begin{pmatrix} 1 & 0 & -1 & 0 \\ 0 & 1 & 0 & -1 \\ 0 & 0 & 0 & 0 \\ 0 & -4 & 0 & 4 \end{pmatrix} \xleftrightarrow{r_4=r_4+4r_1} \begin{pmatrix} 1 & 0 & -1 & 0 \\ 0 & 1 & 0 & -1 \\ 0 & 0 & 0 & 0 \\ 0 & 0 & 0 & 0 \end{pmatrix} \quad (2.0.21)$$

from (2.0.21), we found out that  $\text{rank}(\mathbf{T}) = 2$ .

Now, we compute

$$\mathbf{T}^2(\mathbf{A}) = \mathbf{T}(\mathbf{T}(\mathbf{A})) \quad (2.0.22)$$

$$= \mathbf{T}(\mathbf{BA}) \quad (2.0.23)$$

$$= \mathbf{B}^2\mathbf{A} \quad (2.0.24)$$

where

$$\mathbf{B}^2 = \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \begin{pmatrix} 1 & -1 \\ -4 & 4 \end{pmatrix} \quad (2.0.25)$$

$$= \begin{pmatrix} 5 & -5 \\ -20 & 20 \end{pmatrix} \quad (2.0.26)$$
