Question 1. Show that the unit direction vector inclined equally to the coordinate axes is $\begin{pmatrix} \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \end{pmatrix}$.

Solution: Let **m** be the given unit vector such that $\mathbf{m} = \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix}$. Let $\mathbf{e}_1 = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}$,

 $\mathbf{e}_2 = \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix}$ and $\mathbf{e}_3 = \begin{pmatrix} 0 \\ 0 \\ 1 \end{pmatrix}$ be the direction vectors of the coordinate axes. As \mathbf{m}

is a unit vector, so $\|\mathbf{m}\| = 1$ and also we are given is that \mathbf{m} is inclined equally to the coordinate axis,

$$\mathbf{e}_1^T \mathbf{m} = \mathbf{e}_2^T \mathbf{m} = \mathbf{e}_3^T \mathbf{m} \tag{1}$$

Now, (1) implies

$$(\mathbf{e}_1 - \mathbf{e}_2)^T \mathbf{m} = 0$$
$$(\mathbf{e}_2 - \mathbf{e}_3)^T \mathbf{m} = 0$$
$$(\mathbf{e}_3 - \mathbf{e}_1)^T \mathbf{m} = 0$$

Thus, converting above system of equations into matrix form, we get

$$\begin{pmatrix} +1 & -1 & +0 \\ +0 & +1 & -1 \\ -1 & +0 & +1 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \xrightarrow[R_1+R_3]{R_3=}$$
 (2)

$$\begin{pmatrix} +1 & -1 & +0 \\ +0 & +1 & -1 \\ -1 & +0 & +1 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \xrightarrow{R_3 =}$$

$$\begin{pmatrix} +1 & -1 & +0 \\ +0 & +1 & -1 \\ +0 & -1 & +1 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \xrightarrow{R_3 =}$$

$$\begin{pmatrix} R_3 = \\ R_2 + R_3 \end{pmatrix}$$

$$\begin{pmatrix} +1 & -1 & +0 \\ +0 & +1 & -1 \\ +0 & +0 & +0 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \xrightarrow{R_1 =} \xrightarrow{R_1 + R_2}$$

$$\begin{pmatrix} +1 & +0 & -1 \\ +0 & +1 & -1 \\ +0 & +0 & +0 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix}$$

$$(5)$$

$$\begin{pmatrix} +1 & -1 & +0 \\ +0 & +1 & -1 \\ +0 & +0 & +0 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \xrightarrow{R_1 = \atop R_1 + R_2}$$
(4)

$$\begin{pmatrix} +1 & +0 & -1 \\ +0 & +1 & -1 \\ +0 & +0 & +0 \end{pmatrix} \begin{pmatrix} m_x \\ m_y \\ m_z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix}$$
 (5)

From(5) we find out that

$$m_x = m_y = m_z$$

$$\mathbf{m} = \begin{pmatrix} m_z \\ m_z \\ m_z \end{pmatrix} \quad and \quad \|\mathbf{m}\| = \sqrt{3}m_z$$

For **m** to be a unit vector, we need to divide each element of **m** by $\|\mathbf{m}\|$. Hence

$$\mathbf{m} = \begin{pmatrix} \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \end{pmatrix}$$

Thus, we see that $\mathbf{m} = \begin{pmatrix} \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \\ \frac{1}{\sqrt{3}} \end{pmatrix}$ is the unit direction vector inclined equally to the coordinate axes.

The unit direction vector inclined equally to the coordinate axes
